Patients and Nurses: Moving forward together to improve patient choice

Patients rely on professionals to help outline their treatment options.

The Baxter symposium will examine how patients can be offered an informed choice for where they receive their dialysis treatment.

Through a mixture of clinical leaders and patient experiences the symposium will look at how options are communicated to individuals.

The event is designed to offer evidence-based solutions and practical advice that participants will find compelling.

We anticipate this will be a popular part of the EDTNA/ERCA Conference programme.
