

Please join us for our virtual symposium with live interactive Q&A

# How Do Multiple Cytokines and the JAK/STAT Pathway Lead to Atopic Dermatitis (AD) in Adolescent Patients?

As part of an engaging and informative symposium, an expert panel of leading dermatologists will:

- Highlight the burden of moderate to severe AD and limitations of the current treatment paradigm in adolescents
- Discuss inflammatory and itch signalling pathways in AD, including the role of cytokines and the JAK/STAT pathway and differences in adults vs. children
- Review clinical trial programmes of emerging systemic therapies with focus on children and adolescents

**Thursday, 13 May 2021 • 1215-1315 CET**

**Antonio Torrelo,  
MD (Chair)**

Chair, Department of  
Pediatric Dermatology  
Hospital Infantil del Niño Jesús (Madrid)  
Universidad Autónoma de Madrid  
Madrid, Spain

**Professor Michael J. Cork,  
BSc, MB, PhD, FRCP**

Professor of Dermatology  
Head, Sheffield Dermatology Research  
Department of Infection, Immunity  
and Cardiovascular Disease  
University of Sheffield Medical School  
Consultant Dermatologist, Sheffield Children's  
Hospital and to Sheffield Teaching Hospitals  
Sheffield, United Kingdom

**Amy S. Paller,  
MS, MD**

Walter J. Hamlin Professor  
and Chair of Dermatology  
Professor of Pediatrics  
Director, Northwestern University  
Skin Disease Research Center  
Northwestern University  
Feinberg School of Medicine  
Chicago, Illinois, United States

**These sessions are restricted to healthcare professionals only.**

**Please visit the Pfizer interactive booths for more information about JAK science in AD and pipeline information.**
